Description

I'm a software developer. I've used Java, C/C++, C#, HTML/HTML/CSS, PHP, SQL, Angular+TS, Bash script, Unity, LUIS, QnA maker and MS BotFramework in a variety of projects, most of which can be found on GitHub. I have a passion for AI, ML and NLP, open-source contributions and OS mods. I pick things up very fast, and helping others with code is my life goal.

Accomplishments

2019

- Spoke at TEDx about YouthHax2018
- Gave a workshop on enjoying programming
- Created a set of Linux tutorials on Gist
