## Description

I'm a software developer. I've used Java, C/C++, C#, HTML/CSS/JS, PHP, Bash script and Unity in a variety of projects, most of which can be found on GitHub. I've worked with LUIS, QnA maker, MS BotFramework, async C#, SQL, and HTML/CSS/Angular+TS in a professional software development cycle. I have a passion for AI, ML and open-source contributions. I've worked with very large codebases, am proficient with Object-Oriented Programming, and love modifying operating systems. I can surmount the steepest learning curves and pick up new things very fast. Helping people with code is my life goal.

## Experience

### 2019

- Software development internship at Idea Notion Development Inc.
    - AI development with LUIS, QnA Maker, async C#
    - Web & FB Messenger frontend with Angular+TS, SQL
- Spoke at TEDx about YouthHax2018
- Gave seminar "How to Enjoy Programming"
- Created a set of Linux tutorials on Gist
- Group 3 score in the Canadian Computing Contest (Top 70)
- Demoed at Hack The North 2019

### 2018 – 2019

- Taught Computer Science
- Problem writer on DMOJ, Canada's Largest Programming Online Judge

### 2018

- Partnered with MLH to organize YouthHax2018, the first hackathon ever hosted in Markham
- Gave seminar "Your First Website"
- Taught children with autism to code

## Education

### 2016 – 2020

- Bayview SS IB Diploma Program

In my spare time, I ski, customize my Arch Linux install, work on my novel, and help people every way I can.
